

YASWANTH SEN

Denton, TX | +1 (940) 220-9232 | gyaswanthsen@gmail.com | Portfolio

PROFESSIONAL SUMMARY

Data Analyst and Business Intelligence professional with 3+ years of experience building dashboards, reporting workflows, SQL data models, ETL pipelines, and cloud-based analytics solutions across financial services, healthcare, and e-commerce environments. Experienced in Power BI, Tableau, SQL Server, Azure SQL, SSIS, SSRS, Python, Excel, and data quality validation. Skilled at translating business requirements into KPI dashboards, executive reports, operational insights, and analytics-ready datasets that support financial reporting, healthcare operations, marketing performance, claims reporting, trade reconciliation, and e-commerce decision-making. Strong background in SQL optimization, dashboard development, report publishing, data visualization, reporting automation, data migration, data governance, HIPAA-aware reporting, and stakeholder-facing analytics within Agile teams.

TECHNICAL SKILLS

Business Intelligence & Visualization: Power BI, Power BI Service, Power BI Semantic Models, Power Query, DAX, Power BI Dataflows, Power BI Gateway, Scheduled Refresh, Incremental Refresh, Row-Level Security, Tableau, SSRS, Parameterized Reports, Excel PivotTables, Power Pivot, KPI Dashboards, Dashboard Development, Executive Reporting, Operational Reporting, Self-Service BI

SQL & Data Modeling: SQL, T-SQL, PL/SQL, SQL Server, Azure SQL Database, MySQL, PostgreSQL, Oracle, Stored Procedures, Views, CTEs, Window Functions, Joins, Aggregations, Indexing, Query Optimization, ERDs, Dimensional Modeling, Star Schema, Fact Tables, Dimension Tables

Programming & Tools: Python, SSMS, Git, GitHub

ETL & Data Quality: SSIS, Azure Data Factory, ETL, Data Cleaning, Data Transformation, Data Profiling, Data Validation, Data Reconciliation, Source-to-Target Mapping, Field-Level Validation, Row Count Validation

AI-Integrated Analytics: Microsoft Copilot for Power BI, Power BI Q&A, Copilot in Excel, Tableau Pulse, AI-Assisted Reporting, Natural Language Analytics, Automated Insights, Anomaly Detection

Analytics & Reporting Methods: KPI Definition, Metrics Reporting, Trend Analysis, Ad Hoc Analysis, Data Quality Analysis, Report Automation, Business Requirements Analysis, Stakeholder Reporting, UAT Support

Domain Analytics: Financial Reporting, P&L Reporting, Risk Reporting, Trade Reconciliation, Claims Reporting, Healthcare Claims Analytics, Revenue Cycle Reporting, E-Commerce Analytics, Marketing Performance Analysis, Inventory Reporting, Logistics Reporting, Operations Analytics

Reporting Governance & Delivery: Data Governance, HIPAA-Aware Reporting, Report Documentation, Dashboard Documentation, SLA Reporting Support, Production BI Support, Agile/Scrum

PROFESSIONAL EXPERIENCE

Data Analyst

Sep 2025 - Present

Morgan Stanley | Richardson, TX

- Designed Azure SQL and SQL Server financial reporting models using star schema logic, fact tables, and dimension tables for portfolio exposure, P&L movement, trade reconciliation, and risk metrics across 200K+ reporting records.
- Converted capital markets reporting needs into 10+ Power BI dashboards using semantic models, DAX measures, Power BI Q&A, and Microsoft Copilot for Power BI summaries, reducing recurring Excel preparation effort by 25%.
- Improved risk dashboard performance by tuning T-SQL stored procedures, joins, aggregations, and indexed reporting tables, lowering report load time by 20% during business review windows.
- Configured Power BI Service workspaces with Dataflows, Incremental Refresh, Gateway connections, and row-level security, giving finance users governed self-service access to sensitive portfolio reporting views.
- Automated weekly portfolio and reconciliation extracts with SQL scripts, validation checks, and published Power BI workflows, saving 4-5 hours of manual reporting work each week.
- Reconciled financial reporting outputs using row count checks, field-level validation, source comparisons, and UAT support, maintaining 99%+ accuracy across critical trade reports.
- Published financial exception views with automated insight summaries for trade breaks, aging issues, volume spikes, and portfolio trends, helping operations teams move faster from dashboard review to transaction analysis.
- Coordinated with quant analysts, compliance teams, finance users, and IT teams in Agile/Scrum cycles to define metric logic, document ERDs, resolve production BI issues, and keep reporting delivery within SLA.

Healthcare BI Analyst

Jul 2024 - Aug 2025

UnitedHealth Group | Dallas, TX

- Maintained healthcare reporting data marts for claims, member, provider, and revenue cycle data, keeping daily BI reports available for operations and analytics users.
- Engineered SSIS and Azure Data Factory pipelines to clean, transform, and load 600K+ monthly claims and member records, giving teams dependable datasets for denial, aging, and provider performance reporting.
- Converted payer reporting needs into claims analytics dashboards using Tableau Pulse insights, denial trends, aging views, provider filters, and KPI summaries, reducing manual report preparation by 22%.
- Standardized claim denial, claims aging, member satisfaction, and provider KPI calculations through T-SQL CTEs, joins, views, and window functions, reducing recurring metric mismatches by 18%.
- Strengthened claims data quality by profiling duplicate claims, missing member IDs, provider mapping gaps, status mismatches, and anomaly patterns, improving trusted reporting output by 20%.
- Validated healthcare reporting tables with source-to-target mapping, row count validation, field-level checks, reconciliation queries, and UAT support, maintaining 99%+ accuracy for claims analytics reports.
- Tuned provider and claims queries in SSMS using indexes, filtered logic, and reporting views, cutting ad hoc report response time by 24% for business users.
- Partnered with data engineers, business analysts, revenue cycle teams, and healthcare operations users to document ERDs, validate ETL outputs, and shorten reporting turnaround by 15%.

Clinical Reporting Analyst

HCA Healthcare | Coppell, TX

Dec 2023 - May 2024

- Developed SQL Server and Oracle reporting objects using T-SQL, PL/SQL, tables, views, stored procedures, and triggers for patient, billing, and department datasets, giving hospital teams cleaner operational reporting sources.
- Configured SSIS packages for clinical and billing feeds across 200K+ encounter and charge records, improving daily data availability for hospital operations reporting by 18%.
- Delivered parameterized SSRS reports with charts, maps, filters, and drill-down views for patient activity, billing trends, department volume, and exceptions, reducing manual report requests by 20%.
- Cleaned clinical and administrative datasets with SQL, Python, anomaly detection checks, null checks, duplicate detection, and reconciliation logic, improving recurring healthcare report accuracy by 16%.
- Reduced recurring data feed interruptions by reviewing SSIS logs, failed records, source file checks, and transformation errors, helping downstream clinical and billing reports run on schedule.
- Standardized patient flow, encounter trend, billing exception, and department KPI logic through SQL views, joins, aggregations, and validation scripts, improving consistency across recurring reports.
- Matched source-to-target counts, reviewed field-level values, and prepared AI-assisted reporting notes for UAT cycles, maintaining 98%+ accuracy across clinical and administrative reporting tables.
- Worked with hospital operations users, database teams, and reporting stakeholders to gather requirements, document data definitions, and deliver HIPAA-aware reporting for daily operational decisions.

Data Analyst

Flipkart | Chennai, India

Jul 2021 - Aug 2022

- Built SQL reporting logic across MySQL, PostgreSQL, and SQL Server source tables using stored procedures, views, joins, and aggregations across 500K+ monthly order and SKU records.
- Consolidated order, catalog, shipment, customer, inventory, and campaign data through ETL workflows, improving weekly reporting consistency by 18% across business teams.
- Prepared Tableau-ready reporting datasets for product trends, shipment status, stock availability, returns, and campaign response, reducing manual Excel reporting effort by 20%.
- Improved SKU, order status, inventory, and customer data reliability with SQL validation, duplicate checks, missing attribute reviews, and reconciliation rules, raising trusted reporting output by 17%.
- Defined dashboard dimensions, KPI rules, and category reporting logic with product, marketing, inventory, and engineering teams, giving weekly reviews consistent order and return metrics.
- Reduced recurring report refresh time by tuning SQL queries and indexed lookup tables for product, order, and customer datasets used in logistics performance analysis.
- Analyzed purchase behavior, campaign response, product movement, and delivery delays using Python, SQL, Excel, and exception-trend logic, helping marketing and operations teams improve follow-up planning.
- Delivered weekly and monthly reporting packs using Excel PivotTables, Power Pivot, SQL extracts, and Git/GitHub documentation, improving visibility into operational bottlenecks across inventory, logistics, marketing, and category teams.

PROJECTS

Enterprise Financial Reporting and Risk Dashboard Platform

- Modeled trade, position, account, and portfolio data into SQL Server and Azure SQL reporting marts using star schema design, giving finance analysts a reusable layer for P&L, exposure, and reconciliation review.
- Built Power BI semantic models with Power Query, DAX, drill-through pages, scheduled refresh, and natural language Q&A, enabling analysis of trade volume, risk trends, and exception patterns from a single reporting layer.
- Published Tableau exception dashboards for reconciliation breaks, portfolio movement, and aging trends, giving operations teams a clearer path from executive summaries to transaction-level review.

Healthcare Claims and Clinical Operations Analytics Platform

- Integrated claims, member, provider, patient, billing, and department data through SSIS and T-SQL transformations, producing reporting-ready datasets for payer analytics and hospital operations reporting.
- Developed parameterized SSRS reports and healthcare KPI summaries with filters, charts, and drill-down views, helping teams review denials, patient activity, provider performance, and billing exceptions more consistently.
- Applied SQL, Python, and anomaly detection checks for missing IDs, duplicate records, date errors, claim status gaps, and billing mismatches, documenting HIPAA-aware report rules for clinical, revenue cycle, and operations users.

E-Commerce Marketing, Inventory, and Logistics Insights Platform

- Combined order, SKU, catalog, shipment, customer, inventory, and campaign data through SQL stored procedures and ETL workflows, creating reusable reporting datasets from MySQL and PostgreSQL source tables.
- Prepared Power BI and Tableau reporting models for product trends, shipment status, stock availability, returns, and campaign response, giving business teams cleaner views for weekly marketplace reviews.
- Used Python, SQL, and Excel validation rules to review product, order, inventory, and customer activity data, helping teams identify delivery delays, stock gaps, and campaign opportunities.

EDUCATION

Master of Science in Computer Science
University of North Texas | Denton, TX

2022 - 2024
